

1. Is your BI team skilled only in limited & legacy toolsets?
2. Do you feel constrained by your team's competency to deliver on recent innovations?
3. Are you challenged by lack of agility due to your team's bandwidth constraints?

BI Managed Services

Most BI teams are good at managing routine tasks using a narrow subset of BI tools. When it comes to embracing newer BI technologies & innovations, organizations are often constrained by the skills of their teams. This results in (a) a BI architecture that is not optimized for the desired outcomes, (b) missed opportunities to drive better BI adoption, and (c) reduced ROI of future investments spent on maintaining and managing the infrastructure.

SKILLS GAP	ROUTINE TASKS	PROOF OF CONCEPTS
BEX Analyzer but not Analysis for Office	Process Chain Monitoring	Predictive Analysis using SAP HANA
WEBI and Crystal but not SAP Design Studio and Lumira	Addition of new fields	BIG Data Proof of Concepts
BW Modeling but not optimized for HANA	BEX Query enhancements	Mixed architecture scenarios using SAP HANA EE
Data Modelling in HANA but not data level security in HANA	Patch / Minor upgrades to BW/BOBJ/HANA	Custom Mobile BI app
BI on desktops but not on mobile Devices	Transporting objects across environments	Integrating Non-SAP data with Suite on HANA without HANA EE
... and more	... and more	... and more

Most BI teams are good at managing Routine Tasks, but are challenged with respect to Skills Gap, Proof Of Concepts and agile innovations. BI Managed Services can help you address all of the above successfully.

BENEFITS

- Assure your business that your BI team has the chops
- Gain access to thought leadership backed by expertise
- Virtual & flexible team that can scale up & down
- Leverage Innovation Lab (Carrollton, TX) for quick PoCs
- Drive best-in-class BI architecture & BI adoption

“ Visual BI has been a great partner to work with on several SAP implementations. They demonstrated the ability to develop and implement a BI and reporting strategy on the latest platforms including SAP BW and Suite on HANA.”
