

# VBI View

One Gateway for All BI Content

SAP | Tableau | TIBCO Spotfire | Power BI | QlikSense | SSRS

## One gateway for all BI content

It is not unusual for enterprises today to run two (2) or more BI platforms catering to different user groups. While this helps enhance BI adoption, more often than not, it introduces new challenges that limit the ROI:

- ⊕ Multiple intelligence silos promote lack of visibility & content replication
- ⊕ Limited asset re-use due to lack of centralized metadata & search capability
- ⊕ Users challenged with managing multiple credentials and inconsistent user experience across platforms

Typical efforts to implement an enterprise portal (or) BI gateway to address the above are rudimentary due to the adoption of basic methods such as URL mapping, lack of automation and complexity of administration.

With VBI View, you can extract the most out of your BI platform investments and maximize your ROI. The product features capabilities such as Smart Search and Auto Sync that eliminate complexity, and advanced audit and personalization features that deliver consistent and engaging user experience.

## CAPABILITIES

### ONE GATEWAY

Access all your BI content from a central location without having to sign on to multiple platforms

### SMART SEARCH

Explore entire repository from all platforms using Smart Search and request access to specific reports

### AUTO-SYNC

Capture changes to users, reports, folders and authorization updates in BI platforms automatically

### AUDIT

Review comprehensive reports on content usage analysis, user activity, platform availability and more

### PERSONALIZATION

Reorganize & regroup content from various platforms in user-defined, personalized folders

### SECURITY

Full integration with BI platform security – supports Microsoft AD, LDAP & Single-Sign-On (SSO)

### MINIMAL ADMINISTRATION

Easy to set up & maintain – no coding required

# KEY FEATURES

## LOG IN ONCE

Login once and access all reports from multiple BI platforms

## AUDIT MODULE

Comprehensive reporting on report usage, frequency of use by user and BI platforms' up/down time

## AUTOMATED SYNCHRONIZATION

Synchronize and reflect changes made to user provisioning & report configurations made in the BI platforms

| Synchronization Information |                     |         |
|-----------------------------|---------------------|---------|
| Synchronization             | Last Updated At     | Stat... |
| Sync Reports                | 2017-09-20 09:36:13 | ✓       |
| Sync Users                  | 2017-09-20 09:18:08 | ✓       |
| Sync Authentication         | 2017-09-19 09:00:10 | ✓       |
| Report Metadata Update      | 2017-09-15 18:31:19 | ✓       |

## SMART SEARCH

Search for reports that user doesn't have access to and request access

## COMPREHENSIVE METADATA

Important attributes such as Description, Last refresh date time, Refresh Frequency, Tags enable better search and understanding of the reports

## PERSONALIZATION

Reorganize & regroup content in custom folders
