SAP Lumira Designer
Data Visualization
Quick Start Package

5 DAYS

Go-Live With Your First Executive Application In 5 Days

SAP Lumira Designer is SAP's flagship product for professionally designed dashboards and we have successfully created hundreds of dashboards for our customers since its release.
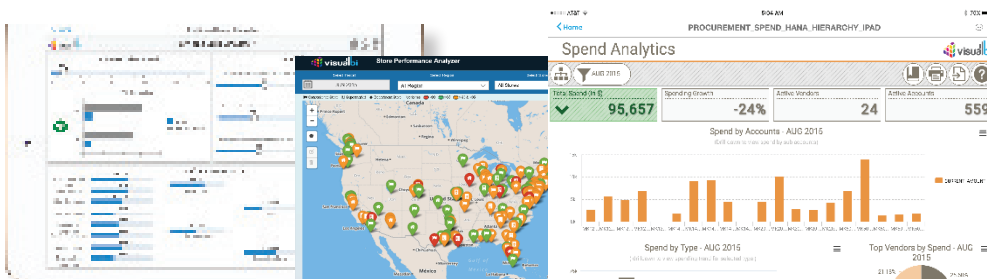

Building great dashboards is not just about the technology. It starts with understanding the requirements, building user stories and making the right visualization choices to deliver a very compelling user experience. Our BI experts can help you with all these items, thereby driving better BI adoption by business users in your orgnization.

Our Offer

Based on your requirements and your very own data we will create a dashboard for your business focusing on a very concrete problem and help you experience enhanced adoption of your BI assets by your business users.

Our Deliverables

- Mock-up dashboards to fine-tune your requirements
- An executive dashboard based on your requirements and data
- Dashboard for mobile consumption
- Knowledge transfer and training to your BI developer
- End-user documentation for the dashboard

visualbi
LOOK FORWARD. THINK AHEAD.

What else is included?

Customers who purchase this offering will also receive free training on our SAP Lumira Designer Extensions (VBX) and access to the software trial. Learn more about our SAP Lumira Designer Extensions by visiting www.visualbi.com/sap-lumira-designer/vbx-extensions

What is NOT included?

As this is a limited-time engagement, our BI experts would primarily focus on rapid dashboard delivery so that your users can experience SAP Lumira Designer firsthand. The engagement would NOT include any efforts towards data validation, user acceptance testing, or any Go-Live preparation activities. To keep efforts reasonable, all activities will be restricted to only one system environment of your choice (Sandbox, DEV, QA, or Production).

In case you would like our BI experts to support such additional activities, we would be pleased to offer those additional deliverables under modified terms & conditions upon request.

Pre Requisites

The following are required to build and deploy your first Lumira Designer application. Should you not have one or more things from this list ready, our BI expert can work with you in advance to ensure readiness

- SAP BusinessObjects BI 4.x Platform installed and available for development
- SAP BusinessObjects Design Studio 1.5 (or higher) client and server installed and available for development
- Data sources available in form of SAP BEx queries, SAP HANA views, or SAP BOBJ Universes for development
- System/Network Access available for our BI experts
- Data Security / Necessary SAP Security (Analysis Authorization) configured for our BI experts
- Requirements for your dashboard available in form of an existing dashboard or report
- Identified KPIs / Metrics for the dashboard
- Formulas / Logic required for KPI calculations
