

Case Study

Spend Analytics On SAP HANA for An Oil & Gas Firm

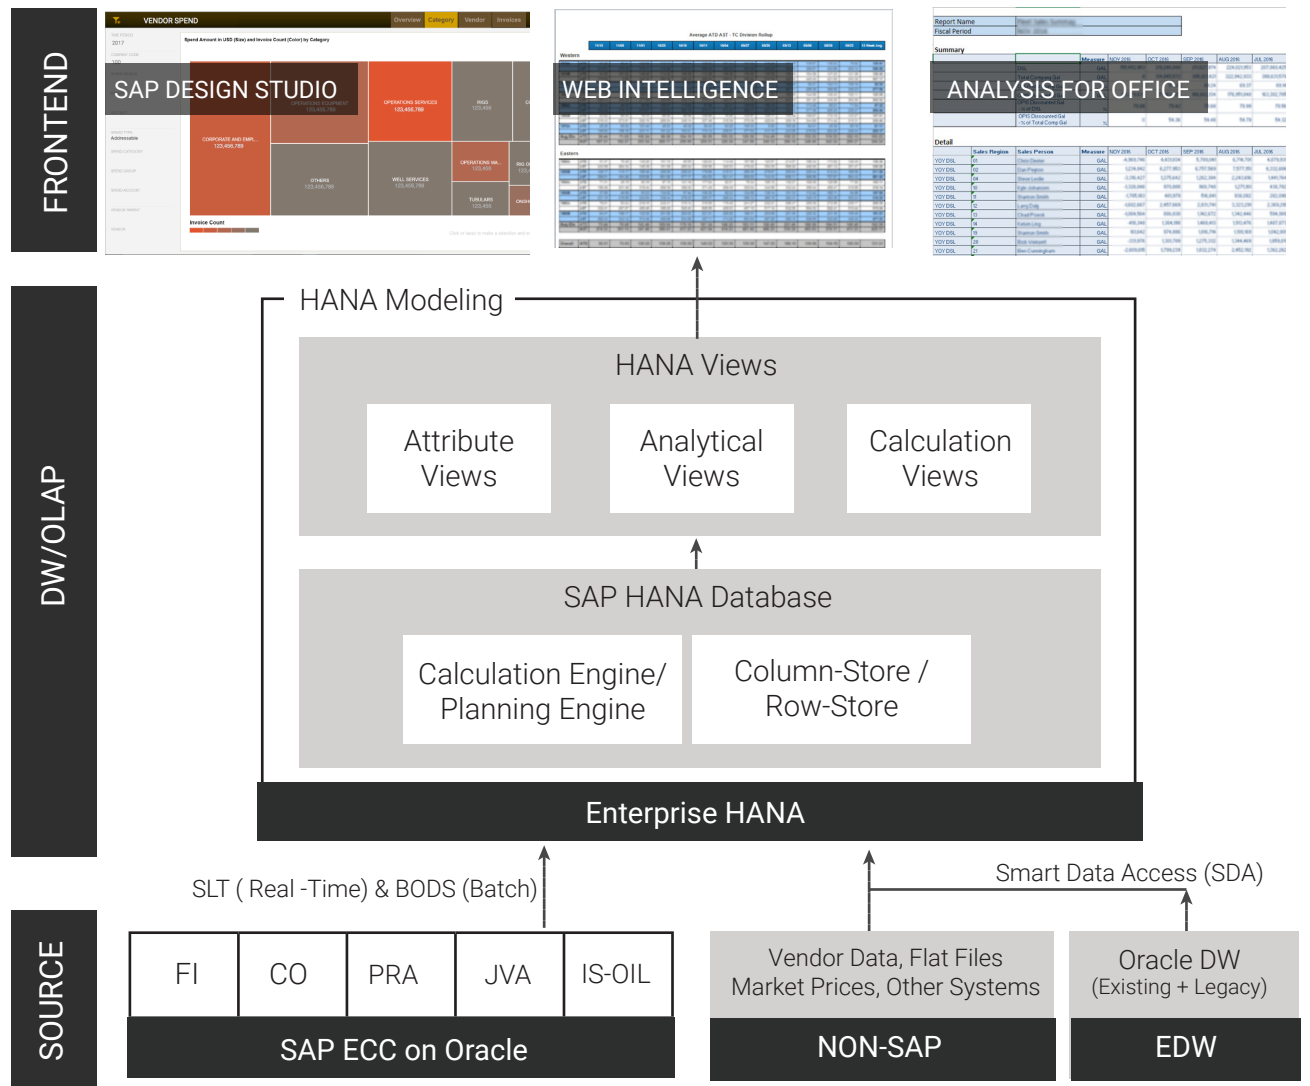

Location
United States

Function
Vendor Spend / Procurement

- Challenges**
- Inability to track and categorize vendor spend
 - Huge amounts of data running into millions of records
 - Complex and multiple transformations required for data prior to reporting

- Highlights**
- Delivered a comprehensive Spend Analytics solution that facilitated users to drill-down and navigate across spend views and hierarchies
 - Helped customer accomplish their vision of modernizing their EDW using SAP HANA Enterprise Edition and migrate from their legacy Oracle EDW
 - Performed Installation, Setup & Modeling of SAP HANA EDW (Sidecar)
 - SAP ECC Data on Oracle was extracted real-time using SLT into HANA DW; Non-SAP Data was also extracted into HANA EE via Smart Data Access (SDA)
 - Built HANA Views merging SAP-and non-SAP data which were then consumed by frontend reporting & visualization tools

"To call this a "learning experience" is a gross understatement. This is new terrain for our enterprise, and we've all learned quite a bit about what lies ahead of us"

- Director – Enterprise Applications
