

**BI Hub**  
One Gateway For All BI Content

## The Challenge

Does your organization have multiple BI products serving different user groups or business needs?

Chances are, these platforms & tools were specifically chosen for their unique and best-in-class capabilities such as enterprise reporting, self-service, visualization, ability to connect to specific sources, IT/business user preferences and more.

Unfortunately, your users now face the following challenges:

- (a) Lack of single point of access to all BI content, and the need to remember credentials for multiple platforms - each accessible using a different URL
- (b) Time wasted in searching for the correct report in platforms with varied user experience & learning curve
- (c) Inability to organize and group reports so that they can focus on their daily analysis needs

## The Solution

With our BI Hub product, users can log in once and run reports from multiple BI platforms in one page. Highlights include:

- ☑ Log in once & access reports from platforms such as SAP BusinessObjects, Tableau, Qlik, Power BI & TIBCO Spotfire;
- ☑ Full integration with BI platform security - supports Microsoft AD, LDAP & Single-Sign-On (SSO)
- ☑ Modifications to users, reports, folders and authorization changes in BI platforms synchronized in a single click
- ☑ Ability to reorganize & regroup reports within the BI Hub
- ☑ No coding required
- ☑ Simplified product licensing model with one-time pricing supporting unlimited users
